		LOCATION: HS/HC-101 Item 4		

ABSTRACT Report is an estimation of economic strengths and weaknesses of European Satellites, individually and as related to USSR as a bloc. Responsibilities of each ORR division in preparing the report are given as well as due date. Report covers devices used by USSR to control European Satellite economy, Soviet gains from the Satellites, deficiencies and weaknesses in Satellite contributions, Soviet net gains, and Satellite economic vulnerabilities. The concentration of industry on military production, basic weakness of Satellite economies, exploitation of their economies by Soviet's CEMA* (Council of Economic Mutual Assistance) and dependence of Satellites on Western imports are discussed. Appendices and a comprehensive bibliography are also included giving vital statistics on specific items and sources. General conclusion of report is that Soviet Russia has gained economically at the expense of Europe and has obtained control of virtually every important facet of their economies.
